Small Curved Pole  
Green Tipped

x16

Stakes: Additional Ultralight Alloy Original Stakes can be purchased separately. Aftermarket stakes can also be used with this tent whether it be with the loop webbing or through the secondary grommet available.

1

- Take out the main body (*Inner Tent / Mosquito Netting*) and unfold and spread it out.
- Assemble Pole Sections - Carefully unfold the pole sections and allow them to slide together by inserting within one another.
- Insert the poles into the pole sleeve channels  
*(we recommend to always push poles through, do not pull through sleeve channels).*

2

- Insert the tent pole ends into the grommets in the corresponding webbing straps.
- Once all the pole ends are inserted into the grommets then take the Ultralight Alloy Stakes that came with the Ionosphere and stake down the corners and the webbing straps with grommets.

*(Note: there is a secondary grommet visible on webbing strap for different stakes if needed)*

3

- Then take out the Fly (*Outer Tent*) and unfold and spread it out.
- To connect the Fly to the main body simply use the Velcro attachment points to connect it to the Poles where accessible through the Pole Sleeve Channel. There are two attachment points on both Pole Sleeve Channels.
